Subject: Comics with 0 pages in the Marvel API

Dear Marvel Developer Portal,

I am writing this report to inform about a possible data inconsistency found in the /v1/public/comics/{comicId} operation of the Marvel API. When searching for specific comics, the API seems to return comics with 0 pages (i.e., "pageCount" response field).

For instance, when providing the input ID "62626", the API returns "0" as the value of the "pageCount" response field. The following video shows how to replicate this process.

I found a total of 3,134 comics with zero pages. In the interactive documentation (swagger), the description of certain response fields (such as "issueNumber") specifies that in some cases the field may be zero (e.g., "will generally be 0 for collection formats"). However, there is no such explanation for the "pageCount" response field. I would be grateful if you could confirm whether there is an inconsistency in the documentation.
