Subject: Invalid diamond codes in the Marvel API

Dear Marvel Developer Portal,

I am writing this report to inform about a possible data inconsistency found in the /v1/public/comics/{comicId} operation of the Marvel API. When searching for specific comics, the API seems to return invalid diamond codes.

1. When providing the input ID "23879", the API returns as Diamond code the string "DEC082451ï¿½", with a set of strange characters at the end (ï¿½)
2. When providing the input ID "22608", the API returns as Diamond code the string "SEP082431 ", with an unnecessary white space at the end.

I would be grateful if you could confirm whether these behaviors are inconsistencies. The following video shows how to replicate this process.
